

General production advice warepotatoes

version 2009 - 01

- * High yield
- * Bold tubers
- * Regular size
- * Good scab resistance
- * Good cooking quality

Characteristics

Cooking type	AB
Maturity	Middle late
Yield mature	Very high
Tuber size	Very large
Tuber shape	Round-oval / Oval
Number of tubers	Average
Flesh colour	Light yellow
Skin colour	Yellow
Berries	No berries
Dormancy period	Very long
Emergence	Normal
Sencor sensitivity	Moderately sensitive
Foliage development	Good
Internal bruising	Moderate sensitive
Little Potato disorder	Rather sensitive
Dry matter content	17,7
UWW	320
PCN Resistance	Resistant: Ro1,4 Susceptible: Ro2/3,5 Pa2,3
Wart disease	Resistant: fysio 1
Spraing	Resistant
Foliage Blight	Susceptible
Tuber Blight	Slightly susceptible
Common scab	Slightly susceptible
Powdery scab	Susceptible
PVYn	Slightly susceptible
Yntn tuber tolerance	Susceptible

Plant populations

Advice planting distance (row distance 75 cm.)

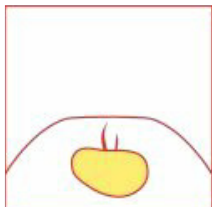

28/35 mm	- ca. 51.000 pl./ha.	Pl. distance ± 26 cm.
35/50 mm	- ca. 47.500 pl./ha.	Pl. distance ± 28 cm.
50/55 mm	- ca. 44.500 pl./ha.	Pl. distance ± 30 cm.

Fertilizer

Fertilisation more or less equal to Spunta.
 Advise Nitrogen fertilisation ca. 250 kg N/ha. including soil supply. A split application is advised, 2/3 at the beginning and 1/3 directly after tuber set.
 Potassium and Phosphorus according to normal soil advice.
 Organic fertilisers are not advised .

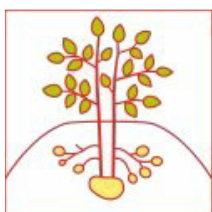

General production advice warepotatoes

Pre-treatment and planting

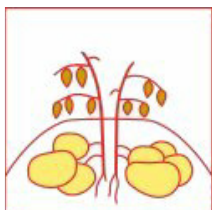

- Dormancy is long with a strong apical sprout dominance.
- Take the seed out of store in good time . A heat treatment is desired to waken up all the sprouts.
- Don't plant in too cold soil. Fabula is little sensitive to Little Potato disorder.
- Plant a bit deeper than normal.
- The best results are achieved on lighter soils with a good soilstructure.

Growing attentionpoints

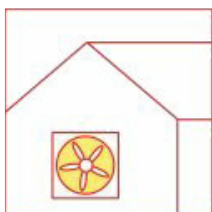

- In the beginning development is a bit slow ; later the foliage develops well.
- The colour of the leaf is rather lightgreen.
- Tuber number is low.
- Spraying against Late Blight (Phytophthora) is advised regularly and in good time .

Haulmkillling and harvest

- Before harvest the tubers must be hardened off. Harvest with care.
- Fabula is not so sensitive to bruising and mechanical damage.
- Limit dropping heights during harvest and storing.

Storage

- Fabula is easy to store when taken care of - a good woundhealing and drying of the product after harvest.
- Too much damage on the tubers and bad woundhealing can cause a strong dehydration of the tubers.
- Ensure a rather low and constant storage temperature because the variety is rather sensitive to Silver Scurf.
